Drysol - Review

Altogether too many people around the world are plagued with excessive sweating known as hyperhidrosis. Most often there are no apparent reasons for such a profuse amount of moisture and it is exceedingly difficult to control through the use of common antiperspirants. As a matter of fact, hyperhidrosis is not limited to the armpits alone, so it is virtually impossible to stop sweaty palms, soles, and those annoying drips on the face. Drysol was created specifically as a treatment for problem areas and can solve the problem, once and for all, with regular, infrequent weekly applications at night.
